

## **CM 7770**

### **Corrosion Inhibitor – Open Cooling Treatment**

A Specially formulated inhibitor Designed to Prevent Corrosion & scale in Cooling Water Supply Systems

CM 7770 corrosion & scale inhibitor rapidly forms a stable, evenly distributed protective film on iron and steel distribution piping and heat exchangers. By reducing corrosion, this treatment increases the life of piping and equipment, minimizes pressure drop by preventing rust build-up and significantly reduces the amount of corrosion products released in the water. A major benefit is control of scales along with corrosion protection.

#### **Extends Equipment Life**

The inhibitors in CM 7770 act quickly and effectively to control corrosion. Lower water side corrosion rates extend system life and reduce downtime for unscheduled maintenance.

#### **Easy to feed liquid**

CM 7770 supplied as liquid, can be fed directly from the bulk tank. There is no need for premixing; therefore operation time and involvement is minimized.

#### **Controls calcium scale**

CM 7770 contains inhibitors for effective scale control and also to keep the system clean and free from deposits.

#### **Feed Requirement**

Feed rates for CM 7770 will vary with the application and system operating conditions. Your Crystal representative will provide technical assistance in determining the optimum dosages rate based on system's requirement

#### **Packing**

CM 7770 is available in 35 kg HDPE carboys.

#### **Precautions**

Acidic solutions Causes burns. Harmful if swallowed.

Do not get in eyes, on skin or clothing. In case of any contact with skin or eyes, wash with plenty of water and get medical help immediately
